

PASSION FRUIT CULTIVATION

Introduction

Passionflower is a rustic, adaptable crop. The plant is a fast-growing perennial climber with a tough, woody texture; the fruit is a large, egg-shaped berry measuring up to 10cm across and weighing up to 90g.

The many varieties of passion fruit vary according to their coastal or forest location. Typical varieties are *Hawaii*, *Brasil* and *Venezuela*.

Growing

The passionflower grows in warm regions of 20-30°C temperature, with a minimum annual rainfall of 1,500mm³.

Soils should be loose, well-drained and at least 1m deep, and without problems of salinity.

Blights and Disease

Blights: Plant lice, worms, citrus red mites (*Panonychus citri*), and green scale (*coccus viridis*, an insect pest of citrus plants.)

Disease: virosis (diseases caused by viruses)

Harvesting

The fruit is harvested eight months after planting.

The fruits are at optimum maturity when they fall from the mother plant.

Pruning

Over-frequent pruning is ill-advised, as this can diminish production and hinder the growth of the plant.

Pruning does reduce risk of blights and disease but should only be carried out when necessary, such as to prevent the plant growing too heavy or to cut back vegetation that will hinder picking.

Post harvest

Windfall fruits should be gathered *at least* once a week, in order for them not to deteriorate. Fruits should be in good condition, without bruises, insect holes or phyto-pathological infection.

Once gathered, place the passion fruits in a cold, dry place: 4-6°C, with a high level of humidity.

To give the fruits a smooth and even appearance, seal them in plastic bags.

The main problem with exporting passion fruit is a significant shrinking (loss of weight), causing the outer skin to wrinkle.

Uses

The seeds and flesh are good to eat, the flesh suiting juices, ice cream and confectionery, and so on.

Passion Fruit is used industrially in tinned food, juices, jams etc. It is also used medicinally as a muscular relaxant.

Practical Action is a development charity with a difference. We know the simplest ideas can have the most profound, life-changing effect on poor people across the world. For over 40 years, we have been working closely with some of the world's poorest people - using simple technology to fight poverty and transform their lives for the better. We currently work in 15 countries in Africa, South Asia and Latin America.
